RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

Signed,

On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

Signed,

RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

Signed,

Brian Lyle

RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

Signed,

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial business owner in Prince William Sound and depend on the area's commercial salmon fisheries for my business's livelihood. The seasonal influx of fishermen, tenders, crewmembers and processors who rely on PWS hatchery production contribute up to 25% of our annual income. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about the process. Convening an emergency meeting on this issue during the middle of the commercial salmon fishing is disingenuous to the fleet and the businesses who rely on this seasonal income. It is my understanding that this same petition has already been denied due to not meeting emergency criteria and that the board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied the PWS fleet and my business an opportunity for meaningful participation.

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

Signed,

ERIK KOKBORG

Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

Signed,

Gerald J McEune

RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

Signed,

Isaiah Mayfield

RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

Signed, Jason Metz

Additional Comments:

We totally depend on hatchery fish
it take pressure off Copper River
Flats when half fleet goes to
PWS. Without hatchery fish this
year ~~the~~ gillnet fleet would be
at dock with the Copper River
Flats closed for whole season.
where half cordova fleet boat
the hatchery.

On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

Signed,

RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

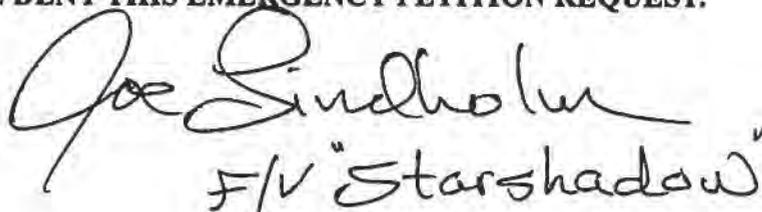

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

Signed,

Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

Signed,

RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

Signed,

RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. Additional Comments:

The past three years, 2018, 2017, 2016, were it not for the hatcheries, my family would not have made it financially. They help stabilize my income in years when wild fish, for whatever reason, don't return in strong numbers.

Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

Signed,

RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. Additional Comments:

This is definitely a matter of correct process, For Those who wish to schedule an emergency meeting on a subject that definitely is of economic impact on a large group of stakeholders (and not just commercial fishermen) who are in the middle of their limited time harvest season, shows an attitude of "We want our way and we'll disregard you to get it", Hmmm - sounds like high level politics. Please stick to your 2018 work session when interested parties from both sides can attend - without adverse economic impacts on them and their families. Also, please excuse the handwriting, the boat won't stay still.

Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough. Further, VFDA hatchery production accounts for 75% of all coho and 90% of all pink salmon caught by sport fish anglers in the Valdez area, and the total sport fish economic output for VFDA is estimated at \$6.6 million annually.

Finally, I wish to voice a concern about process. Convening an emergency meeting on this issue during the middle of our commercial salmon fishing is unreasonable and poor process, especially when the same petition has already been denied due to not meeting emergency criteria. The board has scheduled a discussion on hatchery production at the October 2018 work session. By holding this meeting in Anchorage on July 17, you have denied me and my fellow PWS fishermen an opportunity for meaningful participation.

PLEASE DENY THIS EMERGENCY PETITION REQUEST.

Signed,

Wayne Ackertlund

RE: Comments on KRSA et al. Hatchery Emergency Petition

Dear Chairman Jensen and Board of Fisheries Members:

I am a commercial fisherman in Prince William Sound and depend on the area's commercial salmon fishery for my family's livelihood. 1,500 active salmon permit holders and their crew would not be able to make a living in PWS without hatchery production. Studies have shown that VFDA salmon account for 30% of PWS seiners' annual average gross earnings, while PWS seiners and gillnetters derive 64% of their gross earnings from harvesting PWSAC salmon. On many years in PWS, there would not be much fish at all if it weren't for the hatcheries.

Hatchery programs are economic drivers for Alaskan communities. Studies have shown that 74% of VFDA's commercial salmon harvest value goes to Alaskan residents, with 37% going to residents of Cordova and Valdez, 23% to the Kenai Peninsula, 9% to residents of Anchorage, and 4% combined to residents from Kodiak, Mat-Su, Sitka, and Wrangell-Petersburg. It should be noted that these hatchery fish are not just benefiting commercial fisherman. According to the McDowell Group, almost 700,000 PWSAC sockeye salmon were harvested in subsistence and personal use fisheries between 1999 and 2011, with 73% of these fish going to residents of Anchorage, Fairbanks North Star Borough, and the Matanuska-Susitna Borough.
