

A Legacy at Stake: The Unseen Costs of Fishery Management in the South Alaska Peninsula

My name is Emil Mobeck, and I am a proud community member of Sand Point, a member of the Pauloff Harbor tribe from Sanak, and a commercial fisherman who has spent my entire life working in the Alaska Peninsula. Fishing isn't just a livelihood for me; it's a tradition passed down through generations, and the very foundation of our existence.

The South Alaska Peninsula fishery is a historic one, with catch data stretching back to the beginning of the last century. As the Fisheries Management Report 26-03, Appendix A-10 (pages 31-33) clearly shows, documented fishing activity in our region dates back to 1908. These records only capture a snapshot of a much longer history. We were fishing these waters long before official data began, and this deep-rooted history must be acknowledged and respected. This fishery is not a new fishery; it is a part of our identity and our culture.

We understand and share the concerns regarding the health of fish stocks to our north and east. We are actively and responsibly working on any potential impact our fishing might have. Our area has implemented a modern, live catch recording system, which has proven effective. When data indicates that numbers of a stock of concern are too high, we stand down. We are committed to avoiding the targeting of these fish, precisely because we understand the severe consequences of fishery closures. Our actions demonstrate our commitment to sustainability and our willingness to adapt for the health of these fisheries.

Appendix A-12 (pages 40-45) of the same report highlights chum salmon catch records dating back to 1962—over 60 years ago. This historical data shows our long-standing presence and our legitimate right to fish in our ancestral waters. To push us out, would mean we would have to pick up and move again. Our parents and grandparents moved already in the 1960s to work in the salt stations and canneries that were already established in these areas. We should not be made to pack up and leave again. Our fight is not only for the fish; it is also a fight for the continued existence and well-being of the communities within the Aleutians East Borough.

Consider the broader implications of such actions. If our fishery is dismantled, and it is later discovered that our activities posed little to no threat to other areas, what then? Who will be the next fishery, the next community, that is targeted and dismantled? As an Alaskan Native striving to support my fellow natives, I would like to caution: if they come for us, they will eventually come for you. We should recognize all of our struggles and stand together to protect our way of life and the heritage of all Alaskan Native communities.

Thank you.

Emil Mobeck

Note: Permit and landing numbers are only available from 1970 through present.

^a From 1928 to 1950, commercial salmon harvests in the Aleutian Islands and the South Peninsula were combined. Aleutian Islands harvests are generally much smaller than South Peninsula harvests. South Peninsula harvests were generally dominated by pink salmon. The 1978–1999 Aleutian Islands average salmon harvest was 510,317 fish, whereas the 1978–1999 average harvest for the South Peninsula was 10,671,164 salmon.

^b Since 1989, salmon numbers include test fishery harvests.

Appendix A 12.—South Alaska Peninsula chum salmon catch and escapement by year, 1962–2025.

	Total	382,602	124,429	507,031	—	—	—
2025	Catch	513,399	499,811	1,013,210	88,632	68,869	157,501
	Escapement	323,300	205,100	528,400	—	—	—
	Total	836,699	704,911	1,541,610	—	—	—

Note: Harvest of chum salmon during June is not considered local stock, and chum salmon escapement does not begin until July.

^a Catch includes any salmon (usually very few) caught in the Southeastern District Mainland in July, which are considered local.

^b Catch numbers do not include test fishery.
