

My names collin smith,
I support the predator control program living in units 18 and 17 b/c as of recent growing up as long as I can remember at least from age of 10 as an alaskan resident native alaskan we've always had an ok herd as to harvest of meat for caribou. We've never took more then our share. Supporting the predator control program should be a number 1 priority without the regards of people who actually live in these units 18 an 17. Outside mouths dont Feed us and dont put food on our table. For too long we haven't had caribou to put away or dry.
